

Reviewing setup-test assignment

- If you're new to the class
- Git fun
- Details

New to the class!

Always some 2nd week shuffles

- Follow links in Canvas Announcements
 - Join class Slack Workspace
 - Get a copy of class github repo
- Watch recording of first class
- Do `01-setup-test` assignment (in `/work`)
 - No penalty for new students
 - Ensures you can get/submit work
 - Gives me your account info (!)

Git fun!

`git` is

- Important to your career
- Important to the class
- Powerful
- Confusing
- Possibly Frustrating

Only add/commit correct files

- No `.idea`, no `.DS_Store`, etc
- No `node_modules/`

Only want files useful to another computer

- Not something specific to yours

Easiest to do with `.gitignore` file

- Hint: I put a `/work/.gitignore` file in your repos
 - Won't apply to your projects!

Did you watch the git video I posted?

- Should be helpful!
- Feedback welcome

Details in your assignments

- README is a long, detailed list
- Details matter
 - Computers are picky
 - So are bosses and clients
 - So am I :)
- This assignment was small
- Learn for the bigger assignments

Read/Watch!

- I provided an extra slidedeck about git
- I provided readings in the repo ([readings/git/](#))
- These have links to tutorials
 - Many things you will need to practice/read
 - Build from what I teach
 - Don't rely on Google/ChatGPT only
